Junior Full Stack Developer

Projects

Flick Genie

Interactive Front-End Application | Full Stack Flex Coding Bootcamp at UCLA
Front End Developer

- A live website application that generates descriptions of movies based on your request. It can give you movie suggestions based on the genre listed or name of director of film.
- In this project we learned how to put together a front-end website that uses a pre-loaded API database to help generate the search results for our movies. I focused on working in the front-end team and we used materialize to help us style our page. Our page was deployed to GitHub.

Sage The Seer

Interactive Full-Stack Project | Full Stack Flex Coding Bootcamp at UCLA
Back End Developer

- A live website application that generates a fortune to the user based on a questionnaire. This creative and funny idea was spun off a fortune cookie idea, Sage the Seer asks the user questions and then tells them a fortune based on how they answered.
- In this project we learned how to connect the front-end framework of a website with the backend framework. I focused on the backend of the project this time around by creating the routes, models, and helping review work in handlebars, styling, and our database. This project really pushed me to get more familiar with concepts I was still not familiar with, and pushed me to be more flexible, communicative, and take initiative as a leader in our group. We used Node, Express, Restful API, handlebars, MySQL and the Sequelize ORM for the database. Materialize was used for styling and it was deployed through Heroku and GitHub.

Farmer Notes Website Application

Interactive MERN Stack Single-Page Application | Full Stack Flex Coding Bootcamp at UCLA
Front End Developer & Project Manager

- A live website application that generates notes on a single page. This is a Totoro Themed Interface where the User has secure login into the main site. In the main page there is a To Do List feature inside a Notes web application. People can write their own notes and either save, update, or delete within the user's profile.
- In this project we learned how to connect the front-end framework of a website with the backend framework. We also implemented page security by including an encryption feature for all user's passwords. I chose to be a person that worked on the front-end team this time, along with doing some team management. I also chipped in whenever I

could on tasks that I was already familiar with, and made an extra effort to ask questions and look at how my peers were doing the tasks I was not very comfortable with doing myself yet.

Relevant Work Experience

California State University of Northridge

October 2021 – May 2022

Lifeguard

Los Angeles, California

- Swim Instructor, and Lifeguard Instructor
- Red Cross Certified through October 2023
- Helped relaunch the aquatics department in the CSUN Recreational Center during the pandemic. Boosted morale in department by being a team player, picking up shifts, and training new team mates.

Professional Experience

UCLA Extension Coding Bootcamp

June 2022 – December 2022

Full Stack Developer Coding Bootcamp Course

Los Angeles, California

- Created a movie generator application: Became a Front End Developer and got to make my first commits and getting familiar with reviewing changes and merging my work with other team mates in a public profile. Learned how to work under pressure, and manage the group's progress.
- Create a prophecy generator application: Took on the Back End Developer role in a tag team and got to become more familiar with backend framework. I helped other team mates solve issues across the board and learned how to manage the team in a constructive, yet encouraging way.
- Create a Farmer Notes application: Became a Front End Developer on a tag team. I also helped the team by Project Management and used the agile SCRUM methodology for more seamless guidance for everyone. I also helped other team mates with things they were stuck on, and helped research and ask questions for things our group as a whole struggled to launch and debug.

Additional Work Experience

Nobu Eden Roc Hotel

September 2016 – June 2018

Yoga Teacher

North Miami Beach, Florida

- Lead relaxing, invigorating, uplifting classes for students of all levels.
- Lead pop up classes on the roof top, and beach front settings of the property.
- CPR Certified

TECHNICAL SKILLS | COMMUNITY ENGAGEMENT | LICENSURES & CERTIFICATIONS

- Excellent public speaking skills, excel at leading groups of people, works great under pressure. Strong team player, follows protocol, dedication, can take criticism.
- Knows how to do research, asks questions, cross examine, and apply due diligence.
- Volunteer Teaching Assistant history in Biscayne National Park, Yoga Teacher history with E-RTY-200 Certification, and Lifeguard history with Swim Instructor and Lifeguard Instructor roles Certified through the Red Cross.
